EASY ROCK CANADA

The Evolution of Stone

EasyROCK Canada is the original and still the best option for synthetic stone cladding. Our panels are Made In Canada and are tough enough for the Canadian climate. Years of research and development, and close contact with our clients, has inspired many unique and exclusive innovations that we are confident will impress Canadians from the renovator, to the home builder. We have several patented technologies you may be interested in such as the Hardcoat technology and our authentic colouring system that uses pure Iron Oxides.

We invite you to check out our website at www.EasyRockCanada.com and view our videos, gallery, and other information.

HARDCOAT TECHNOLOGY

✓ **TOUGH** —Our new, *patented* Hardcoat technology is *virtually scratch proof* and *low maintenance*. No longer are constant touch-ups required to keep our stones looking like new. Just wash it with a garden hose when it's dirty.

✓ **FIRE RESISTANT**—The Hardcoat also contains fire resistors which makes EasyROCK panels far *safer* than ever before.

✓ **COLOUR FAST**—Because the Hardcoat chemically bonds with the iron oxides, we are confident that we have *the most colour-fast panels on the market today*!

IRON OXIDES

✓ **REALISTIC**—EasyROCK Canada holds a patent on a special colouring process that involves pure *iron oxides*, not *paint*. Many ask us why our panels look so authentic, the reason is that for, all intents and purposes, the surface IS rock. Iron oxides are essentially crushed rock dust. Every stone on every panel typically has 3-5 colour variations to achieve a *realistic marbling effect*.

POLYURETHANE

✓ **LIGHTWEIGHT**—Compare the shipping costs of 1000sqft of real stone vs. 1000sqft of polyurethane based stone! This savings alone makes EasyROCK panels a far *better economic choice.*

✓ **NO LOAD SUPPORT**—There is no need for extra considerations such as load support because each panel is only 4lbs and *screws* to the wall! You can easily go *four stories* high with our stone and never worry about it falling out of the mortar.

✓ **INSULATIVE**—Polyurethane happens to be one of the best insulators on Earth, adding an extra *4.5R per Inch*. Considering that our panels are over an inch in some places, and less in others, we average *5.7R per Panel*!

100% MADE IN CANADA

✓ **By Canadians, For Canadians**—We are proud to offer our clients *Canadian quality at competitive prices*. No other panel of this type is actually manufactured within our borders.
